

Energy Efficiency at Home

A free presentation in your neighborhood brought to you by the San José Public Library and the Silicon Valley Energy Watch Program

Did you know that energy efficiency is the most cost-effective way to reduce greenhouse gases and fight global warming? This brief workshop will give you tips on easy ways to save energy and money at home, as well as an overview of programs from Pacific Gas and Electric Company (PG&E) and the City of San José that can help. Solar renewable energy and other environmental issues will also be addressed.

Silicon Valley Energy Watch is a joint project of PG&E and the City of San José. By providing integrated education, outreach, and coordination throughout Santa Clara County, the program helps Silicon Valley take advantage of cost-saving, energy-efficient technologies. The program connects professionals, businesses and residents to the broad range of audits, rebates and technical support available to help them save energy and money.

Snacks will be provided!
